Please give details

Policy 2

Policy 2 should be amended to reflect the approach set out in the text and the remainder of the document. In particular, there should be a reference to the maintenance of production capacity in addition to stocks of reserves. Similarly, it would be consistent if there was a reference to the fact that other policies provide for planning permission to be granted in other circumstances. The policy should be amended as follows:

"Except as provided by other policies, planning permission will only be granted where necessary to maintain production capacity for minerals and stocks of permitted reserve shaving regard to agreed sub regional apportionment figures or,"

Comments on the Sustainability Appraisal (SA) Report

Is any significant information missing or misrepresented?

Are judgements made in developing the

Sustainability Appraisal framework correct?
Do you agree with the results of the assessment of effects and any mitigation and monitoring measures proposed? If not do you have any suggestions?

Please note you should complete a separate entry for each Policy, Paragraph or Site Map you wish to comment on. You can create a new entry by clicking on 'add' after you complete a comment.

Policy

Policy 6

Site Map

Please give details

It is considered that this policy would benefit from some re-organisation to identify at the outset the circumstances when planning permission may be granted in respect of applications outside preferred areas. Also to address the uncertainty that exists in connection with the interpretation of the term 'small scale extension'. The following revision is proposed: "Plannign permission for non-energy minerals development outside the preferred areas will not be granted unless:

(i) It can be demonstrated that it is required to meet a proven need that cannot otherwise be met from a more sustainable source or

(ii) It consists of an extension to an existing site existing site at a scale that does not conflict with the objectives for sustainable minerals development or

(iii) It involves significant net environmental benefits or

(iv) The sterilisation of reserves would occur.

Any development must also accord accord with the requirements of other relevant policies contained in the Minerals Development Framework."
